## Bluetooth Receiver

Fig 1 - Image of Amplifier and Bluetooth Receiver

A Bluetooth receiver driving an SPL 700 amplifier feeding 2 speakers is situated in the Gallery. The receiver may be paired with a mobile phone up to a range of approx. 15m (50 feet) such that music tracks may be selected and volume controlled from a device in the Reception area if desired.

## Operation

1. Go to the Gallery and switch on the Bluetooth receiver and the amplifier at the double socket under the table. These will glow blue when power on.
2. Press the circular blue light on top of the receiver to pair your device (iPod, smartphone etc.) with the Bluetooth receiver called “BO6+”
3. The system is now ready to play music from your music library.

### Portable PA System

The portable PA system works on mains or battery supply. It is supplied with a handheld wireless microphone.

### Operation

On the rear panel, switch on both system and microphone and select microphones. The volume is controlled by a combination of mic gain and master gain to provide an acceptable level of output without distortion or feedback. The microphone has a range of up to 5 metres from the system.
